## CABINET INSTALLATION AND REFINISHING

Cabinets are the heart of kitchen design. Cabinets are the clue to the age and build quality of a home's favorite gathering space. For a budget-oriented approach to kitchen remodeling, some units can be refinished to bring extra life without going to the extent of complete replacement. Staining, painting, distressing and glazing are coating-oriented approaches to refinishing. We have the equipment and experience for durable furniture-grade professional finishing. In addition to the finish, subtle carpentry changes, milling details, hardware updates and even re-facing in some cases, can completely change the style of certain cabinets. While more of a cost commitment, replacing old cabinetry with new designs, features and layouts is

an investment in the equity of the home. An updated kitchen is the best way to increase a home's value; a well thought out remodel with quality cabinets and hardware will easily last 20-30 years! I have networked with various local kitchen design and cabinet shops and have multiple sources to build your custom layout. Chances are, your current cabinetry and kitchen layout could be more functional. I will work with you to make sure every little detail of storage and usability has been solved, and the installation will simply be immaculate!
